The Carbon Sense Coalition today urged the federal government to stop wasting money sending plane-loads of people to pointless climate conferences, starting with the UN conference in New York on 23rd September 2014 and including the jaunt to Paris next year.

The Chairman of “Carbon Sense”, Mr Viv Forbes said that over 20 years of such conferences have achieved nothing useful for the environment or for the tax payers who fund them.

Quote:

Already China, India and Germany have announced they will not attend in New York, and it is certain that Russia will give it a miss. Therefore no significant decisions will be taken, and no one from Australia should attend.

For the Paris climate party next year, Australia should send just one delegate with just one instruction: “Demand an independent audit of the science behind the failed climate models”.

Not one net payer of tax will be disadvantaged if all spending on this endless round of national and international climate conferences is stopped.

“Cut Climate Junket Costs” is an easy first step towards reducing the Australian government deficit.
